

# SEQUOYAH SOFTWARE

## **BULK Water Billing Software**

Sequoyah now offers Bulk Water Billing Software. New companies are forming to sell ditch water, irrigation water, canal water, runoff water, well water and more. We see that many towns, rural water companies, and irrigation companies are selling bulk water. These are sales of large quantities of water to towns, rural water companies, irrigation companies, campgrounds, trailer parks, manufacturing companies, and etc..

Bulk water can account for more than half of the revenue of a water company. Being able to manage and calculate the bills and the production of the water is crucial to calculating your water loss, profit and loss, as well as monthly water usage.

Sequoyah offers a software option for Bulk Water Billing. The software can calculate bills by water usage from the meter, print individual receipts, and show reports for the month or the year. The system can also be tied to card systems that track usages and automatic meter reading. We also can offer a point of sale cash drawer system or ID card system to automate the process of selling the water.

Bulk water systems can be set up as a separate entity to help keep the accounting accurate. The Bulk water option has its own rate, usages, and history that includes all sales transactions.

We are excited about talking with you about your bulk water sales needs and how we can automate the process and make it easier for your company to send bills via email or use credit card processing to help you get your revenue faster.

Please call us for more details on how we can help you with your bulk water sales needs.
